- Carbon and Peatland 2016 Classification**
- CLASS 1 All vegetation cover is priority peatland habitats. All soils are carbon-rich soils and deep peat
 - CLASS 3 Dominant vegetation cover is not priority peatland habitat but is associated with wet and acidic type. Occasional peatland habitats can be found. Most soils are carbon-rich soils, with some areas of deep peat
 - CLASS 4 Area unlikely to be associated with peatland habitats or wet and acidic type. Area unlikely to include carbon-rich soils
 - CLASS 5 Soil information takes precedence over vegetation data. No peatland habitat recorded. May also show bare soil. All soils are carbon-rich soil and deep peat
 - Mineral soils - Peatland habitats are not typically found on such soils
 - Non-soil (i.e. loch, built up area, rock and scree)
